## Caliper Life Sciences in the UK

### Sales and Marketing

Caliper Life Sciences diverse range of products and services is available through the UK subsidiary. This includes state-of-the-art microfluidics, lab automation and liquid handling technologies and discovery and development outsourcing solutions. Our professional team of sales and technical support staff can advise and guide customers regarding applications on Caliper's entire product portfolio to ensure they attain the best possible solution to achieve their research objectives.

### Service and Support

Our team of experienced and highly qualified service engineers provide a dedicated and efficient response to our customers working in scientific research throughout the UK and Ireland. This combined with an in-house telephone support network ensures our customers receive a localised and reliable response when they need it most. A flexible menu of service plans is available allowing customers to build the service package that meets their individual requirements.

### Training

A comprehensive selection of certified training courses is available to enable our customers to gain a more detailed understanding of the operation and maintenance of Caliper products with the aim of keeping them running at maximum efficiency. Training can be arranged on-site or at our training facility in Preston Brook and can be customised to cater for the specific needs of the organisation or individual.

**Caliper Life Sciences in the UK is proud to offer:**

- Highly motivated and qualified staff dedicated to serving customers.
- Innovative product lines supported by an established global company.
- A reputation for high quality, easy-to-use products.
- Dedicated service and training facilities for Caliper products.

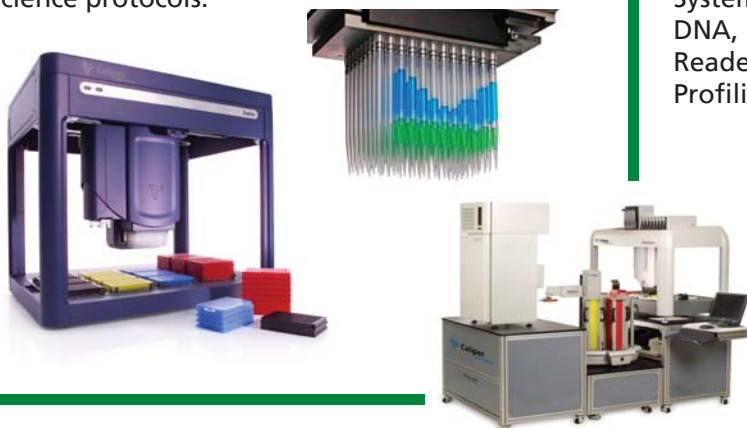

# Products and Services

Caliper Life Sciences is one of the first life science instrumentation companies to provide an integrated package of products and services that span both in vitro and in vivo pre-clinical research.

## Liquid Handling & Automation

Caliper offers a range of liquid handling workstations automating a wide variety of life science protocols.

## Microfluidic Technology

Our revolutionary LabChip technology is utilised on the LabChip 90 System for automating electrophoresis on DNA, RNA and protein samples and in the EZ Reader for Enzymatic Assays and Selectivity Profiling.

## IVIS In Vivo Imaging Systems

Caliper's IVIS imaging technology maintains market leadership for both bioluminescent and fluorescent in-vivo imaging.

## Drug Dosage and Formulation

Fully automated sample preparation and analysis for the most common pharmaceutical tests in development and quality assurance.

## Analytical Sample Preparation

A range of TurboVap concentration workstations is available for a variety of sample sizes, whilst the AutoTrace and RapidTrace are ideal for Solid Phase Extraction.

## Caliper Discovery Alliances and Services (CDAS)

CDAS offers in vitro and in vivo outsourced research services for screening, profiling and assay development.
